

# PuRoMax™

## Pure Water To The Max

The quality of drinking water is on everyone's mind today. Bottled water sales have skyrocketed. Municipal water treatment plants add chlorine to kill germs. This municipal water is tested for our safety at the plant. However many contaminants, such as lead and asbestos can be introduced by pipes that supply water to our home.

Bottled water is expensive and inconvenient. But how do you get quality water from your own refrigerator and ice maker? How do you get quality water without breaking the bank or your back?

Because coffee and tea are 99% water, they are no better than the water with which they are made. The PuROMax system delivers better tasting coffee, tea and clearer ice. Your pets and plants will love it too.

### **PuROMax Delivers!**

**Quality** water that exceeds most bottled for only pennies a gallon.  
**Quality** water right at your fingertips. **Quality** for ice and prepared beverages.

# The PuROMax line removes over 90% of sodium salts from tap water.
